

Focus group : 2015-09-02 (with students)

Search and Browse:

Autocompletions (suggestions and help is required)

Receiving more search results than those that exactly match your search: specific results and then have option to view more if you want to..don't want it too cluttered

Categories: time periods/changing of time (special events..i.e. pre removal post removal), media type

Difficulties: search bar for everywhere (this collection or whole archive) (reddit has as default this collection- uses a checkbox..see github for clever way to do this in terms of interface)

Natural language queries (syntax when searching..what does it mean..is there special meaning)

History and Statistics:

Cookies prompts so that they know that they are being watched...some people aren't comfortable

People who looked at this also looked at this

Make sure that the browsing history can't be reconstructed exactly...

Own local cookies (local storage instead of cookies)

Design element of the session (results for the lo-fi prototype)

Search: autocomplete (option 2 rather)..but would like both...option 1 when typing and option 2 when finished typing

Categories: option 1

Search results: 2

browse (category placement)

browse:(category filtering): option 2 preferred by one person...one level because of issue of crowding

Specific image: hovering over means you can't really get an overview of the picture/text contained

Focus group : 2015-09-07 (with clients)

Search and Browse:

Categories: **date, event(press release), media type, (academic paper), pageant, locations/neighbourhoods (metadata?)**

Movie snaps:

date

media-type

event

academic paper

exhibition

street/location (only happened on two streets)

Sequins:

date

media-type

event
academic paper
exhibition
pageant

Harfield:

date
media-type
event
academic paper
exhibition
street/house --would be cool if got actual data for that specific house

Difficulties: issue of no results found after typing long search string. Visibility of where the archive begins or where we can search...cropping off of pictures,..

related items (expanding and refining search)

Proactive in prompting for guidance

I don't know what I'm searching for..

Prefer more options (specific search and related is separate)

Browsing categories: time, media type

Difficulties: where am I when browsing

Natural language is an issue...

History and statistics:

Updated items to collections..when you log on...in past x months what has been uploaded
recommendations
